SUMMARY

Full-Stack Engineer with 3+ years building production web applications. I build and maintain three products at Vizograph Solutions: a marketing analytics and client reporting platform, a garment production workflow system, and a browser-based chart editor.

EXPERIENCE

Full Stack Engineer, Vizograph Solutions **Oct 2024 – Present**

- Own features end-to-end across three live client-facing products; promoted from Frontend Developer within the first year.
- Work across the stack on each feature: React and Next.js interfaces, Node.js and Hono APIs, and PostgreSQL and MongoDB data.
- Maintain these products in production, including their third-party integrations, debugging and iterating on live issues.

React Developer, WanBuffer Services **Sep 2023 – Aug 2024**

- Delivered an e-commerce frontend with responsive product and category navigation and API-driven data.
- Developed a multi-party contract management platform with Google/Microsoft OAuth, email verification, PDF and image upload/viewing, and localisation for English, Arabic, French, and Spanish.

PROJECTS

Vizantra — Marketing Analytics & Client Reporting Platform | Next.js, React, Hono, PostgreSQL (Neon)

- Reporting platform for marketing agencies. Connects a client's analytics and ad accounts, then turns that data into dashboards and client-ready reports, each client in a separate workspace.
- Integrated GA4, Google Search Console, Meta Ads and Google Ads over OAuth, with per-account connection status, reconnect prompts when authorisation is revoked, and filtering by source and status.
- Shipped scheduled delivery: weekly and monthly cadences per report, timezone-aware next-send, rolling or fixed coverage windows, multiple recipients, and manual send-now.
- Reports go out as white-labelled emails under the client's own branding with the PDF attached and a hosted link, or as no-login share links scoped to a single report.
- Designed a drag-and-drop report builder that outputs multi-page documents and presentable slide decks from a searchable metric catalogue per connected source, each page carrying generated plain-English narrative on its metrics.
- Dashboard layer offers five prebuilt templates (cross-channel, GA4, Google Ads, Meta Ads, SEO) plus blank, with KPI cards, time series, donuts, choropleths and sortable tables.

Style Creation — Garment Production Workflow System, stylecreation.in | React, Node.js, Express, MongoDB, AWS S3

- Tracks every lot from inward stock through thread cutting, samples, sets, washing, alterations, factory-ready stock, and outward dispatch, reconciling sent, received, and remaining pieces at each stage.
- Operations dashboard surfaces inward, processed, delivered and outward KPIs, a lot-status breakdown that drills into individual lots, pending items by process, and a daily inward-vs-delivered graph.
- Per-lot views cover cost breakdown, an accessory bill of materials that auto-computes per-piece totals, printable QR-coded job cards, and delivery and return-goods challans, with image uploads on AWS S3 and role-based access.

ApexCharts Editor — editor.apexcharts.com | React, JavaScript, ApexCharts.js, Zustand, Tailwind CSS

- Built the frontend of a browser-based chart editor: a multi-chart canvas where users place, drag, resize, reorder, and duplicate charts without code, then save, share, or export to PNG, SVG, and JPEG.
- Supports 23 chart types, including stacked and 100% stacked bar/column, timeline, funnel, radar, heatmap, treemap, and bubble.
- Added an editable data grid with CSV import and live updates, plus configuration panels for theme, axes, fonts, fills, legends, labels and per-type options.

EDUCATION

Diploma in Information Technology, Aditya Silver Oak Institute of Technology — CGPA 8.50 **Jul 2019 – Jul 2022**

ACHIEVEMENTS

Odoo Hackathon — Finalist. Workspace and library management system: admin panel with authentication, user management, pagination, and filtering.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, shadcn/ui, Zustand, Redux Toolkit, HTML, CSS

Backend & Data: Node.js, Express.js, Hono, REST APIs, PostgreSQL, Neon, MongoDB, Mongoose

Tools: Git, GitHub, Claude Code, Cursor, Codex
