SUMMARY

Frontend Developer with strong experience in React.js, JavaScript, and modern UI frameworks, focused on building responsive, scalable, and user-friendly web applications. Experienced in developing dynamic interfaces, integrating APIs, and optimizing application performance. Passionate about clean UI design, maintainable code, and delivering intuitive user experiences.

EXPERIENCE

Frontend Developer, Vizograph Solutions

October 2024 - Present

- Designed and developed a custom chart editor using ApexCharts.js enabling users to create and customize multiple chart types.
- Designed an intuitive drag-and-resize interface to simplify chart customization and improve usability.
- Implemented dynamic dataset management allowing users to add series and rows in real time.
- Built export functionality allowing charts to be downloaded in PNG, SVG, and JPEG formats.
- Implemented light and dark mode support and ensured responsiveness across devices.

React Developer, WanBuffer Services

September 2023 - August 2024

- Developed document and user management features, including adding/viewing PDFs and images.
- Integrated Google/Microsoft authentication, enhancing security and access convenience.
- Improved contract management workflows by developing robust frontend-backend integration.
- Developed a seamless email verification interface and an intuitive ecommerce frontend, enhancing authentication and user experience.
- Created a dynamic Mega Menu with smooth transitions and integrated it with APIs to fetch and display category data in real time.
- Developed an interactive Spin & Win game using React, improving engagement during company events.

HACKATHON FINALIST

Workspace Management and Library Management System

- Selected as a finalist in the Odoo Hackathon.
- Built a complete admin panel with authentication and user management.
- Developed multiple pages including Home, Workspace, Booking, and Dashboard.
- Implemented features like pagination, filtering, and structured data management.

PROJECTS

Style Creation – Garment Workflow Management System (MERN Stack)

Architected and developed a full-stack garment production workflow system used to track order lifecycle, vendor operations, and production stages from entry to delivery. <https://stylecreation.in>

- Production workflow tracking across multiple stages
- Real-time analytics dashboard with performance metrics
- Vendor, brand, and product management modules
- Image upload with AWS S3 integration
- Advanced search and filtering system
- Mobile-responsive interface with optimized UI performance

Job Portal (Diploma Final Year Project)

A web application designed to bridge the gap between job seekers and recruiters by providing a platform to post and search job vacancies, ensuring efficient candidate-job matching. The application is built using HTML, CSS, and JavaScript for the frontend, with Node.js handling the backend logic and MongoDB as the database for storing user and job data.

AI Jurist – Contract Management Platform

Developed a digital contract system supporting multi-party agreements, cloud storage integration, and providing support for multiple languages, including English, Arabic, French, and Spanish.

Plugi - Email Verifier

Developed a web application that verifies email addresses in real-time and integrates third-party email verification services.

Store App

Created a Store App using the MERN stack featuring advanced filtering options such as price range filtering (low to high and high to low), company selection, and search functionality. Additionally, the app includes pagination for efficient browsing of products. This project highlights my skills in full-stack development, implementing dynamic search and filter features, and ensuring a smooth user experience with React and MongoDB.

Library Management

Developed a Library Management System using the MERN stack. This app allows users to upload books, including book images, and provides functionality to edit or delete books. To enhance the user experience, Integrated toast notifications to inform users when a book is successfully uploaded or edited. This project showcases my ability to build full-stack applications with image upload functionality, user-friendly interfaces, and real-time feedback features.

Spin Game

Developed a Spin and Win web application using React.js, specifically designed with a mobile-first approach to provide an optimal user experience on mobile devices. The app features an interactive spinning wheel with smooth animations and real-time feedback, allowing users to win various rewards. This project showcases my skills in creating responsive designs and delivering engaging, mobile-friendly web applications.

Xora

Created a React Native mobile application using Expo, with Appwrite serving as the backend for authentication, database management, and file storage. The app enables users to upload and play videos, manage content dynamically, and enjoy a seamless interaction with a responsive user interface. Emphasized providing a smooth user experience through optimized performance and cross-platform compatibility.

EDUCATION

Diploma in Information Technology

Aditya Silver Oak Institute of Technology

July 2019 - July 2022

CGPA - 8.50

SKILLS

Technical Skills: React, JavaScript, Redux Tool Kit, HTML, CSS, Bootstrap, Tailwind CSS, Zustand, Node.js, Express, MongoDB

Tools: Git, Github
